

Galaxy SIII Mobile Insert

INSERTING PHONE:

Simply push phone into the insert. We ship the mobile insert centered and snug. If the mobile insert at anytime loosens and moves off the center of the lens you can loosen the 2 screws just a bit that hold the insert. Then adjust the insert till the phone lens is centered in the mounts lens and tighten screws to lock in place.

REMOVAL OF PHONE:

Remove phone gently by using fingers to separate the sides from the phone while prying up the phone from the bottom. The Galaxy case/insert is heavily glued to a thin slice of carbon fiber.

Avoid prying too hard to remove by spreading the sides of the case from the phone. This allows the phone to be removed with very little prying needed.
